UI Test scenario: Clear Input Functionality (Positive Scenario)

Test scenario - Clear Sinhala input field.

Objective:

This test checks if the Clear button in the SwiftTranslator application really works. It should remove all the text from the input area and get the user interface back to normal. The SwiftTranslator application needs to be checked to see if the Clear button does what it is supposed to do. The Clear button in the SwiftTranslator application should erase all the text, in the input area.

Perconditions:

- The SwiftTranslator web application is now up. Running just fine.
- The area where you can type in Sinhala is showing up. You can use it.

Test Steps:

1. Enter a Sinhala sentence into the Sinhala input text box.
2. Make sure the text you type is shown properly in the box where you are typing.

3. Click on the “Clear” button.

Expected Result:

- The box where you type in Singlish is emptied away.
- When you see a translation it gets. Goes back, to the start.
- There are no error messages that show up.
- The user interface is always ready for you to put in information and it will keep working properly.

Test Type:

- UI Functional Test
- Positive Test Scenario

This test ensures proper UI behavior and usability by allowing users to quickly clear their input without refreshing the page, thereby improving the overall user experience.
